Blessed G/Michael Catholic Secondary School

Semester 1 Agriculture Final Examination for Grade11

Academic Year: 2024 / 2018 E.C. Time Allowed: 2:00'

Name: _____ **Grade & Sec:** Grade11 _____ **R.No:** _____

I. Write 'True' if the statement is correct and 'False' if it is incorrect.

____ **1.** Soil texture refers strictly to the relative proportions of sand, silt, and clay mineral particles.

II. Choose the best answer among the given alternatives.

____ **2.** Which plant nutrient is primarily responsible for encouraging vigorous root growth and early seedling establishment?

A. Phosphorus **B.** Potassium **C.** Nitrogen **D.** Iron

____ **3.** What is the primary function of potassium (K) in physiological plant processes?

A. Regulating stomatal opening and closing and enzymatic activation
B. Forming structural chlorophyll molecules
C. Cellulose synthesis in cell walls
D. Fixing atmospheric nitrogen

____ **4.** Which of the following describes broadcast seeding as commonly practiced in smallholder teff cultivation?

A. Scattering seeds uniformly across the soil surface by hand
B. Planting single seeds in deep 10 cm furrows
C. Transplanting seedlings from nursery beds
D. Dropping seeds through a precision mechanical seed drill

____ **5.** Crop rotation helps control soil-borne pests and diseases primarily by:

A. Breaking the life cycle of host-specific pathogens and parasites
B. Sterilizing the topsoil with chemical salts
C. Raising the soil temperature above 60°C
D. Eliminating the need for rainfall

____ **6.** Which of the following livestock breeds is an indigenous Ethiopian zebu cattle breed recognized for draft power in the highlands?

A. Boran cattle **B.** Fogera cattle
C. Sheko cattle **D.** Holstein Friesian

____ **7.** What is the gestation period of domestic dairy cattle (cows)?

A. Approx. 150 days **B.** Approx. 280-285 days
C. Approx. 340 days **D.** Approx. 115 days

____ **8.** Which soil conservation practice consists of building earthen embankments across hillslope contours to trap runoff and silt?

A. Bund construction (Soil / Stone bunds) **B.** Downhill ditching
C. Clear felling **D.** Surface burning

____ **9.** In apiculture, the modern moveable-frame beehive that allows non-destructive honey harvesting is known as the:

A. Langstroth beehive **B.** Traditional log hive
C. Clay pot hive **D.** Woven straw skep

____ **10.** What is green manuring in sustainable agronomy?

A. Plowing immature green leguminous plants into the soil to improve organic matter and nitrogen
B. Painting farm equipment green to resist rust
C. Spraying green copper sulfate fungicide
D. Spreading fresh uncomposted plastic mulch
